Relationships

The screenshot shows the ONTAP Relationships configuration interface. At the top, there are action buttons: Create, Edit, Delete, Operations (with a dropdown arrow), and Refresh. Below these is a table with four columns: Source Storage Virtual..., Source Volume, Destination Vol..., and Destination Storag... (truncated). The table contains one row with the following values: snap_src1, mirror_me, mirror_me_dest, and snap_src1. Below the table, there are two columns of configuration details. The left column lists: Source Location: snap_src1:mirror_me, Destination Location: snap_src1_mirror_me_dest, Source Cluster: cluster1, Destination Cluster: cluster1, Transfer Schedule: None, Data Transfer Rate: Unlimited, and Lag Time: None. The right column lists: Is Healthy: Yes (with a green dot), Relationship State: Uninitialized, Network Compression Ratio: Not Applicable. At the bottom, there are three tabs: Details (selected), Policy Details, and Snapshot Copies.

Your customer wants to protect a volume and replicate it to a secondary volume. The customer has tried to configure

this relationship using OnCommand System Manager. Upon reviewing this newly configured relationship, you discover that the configuration does not satisfy the customer's stated requirements.
